

Blueprint for Success

1 Discovery

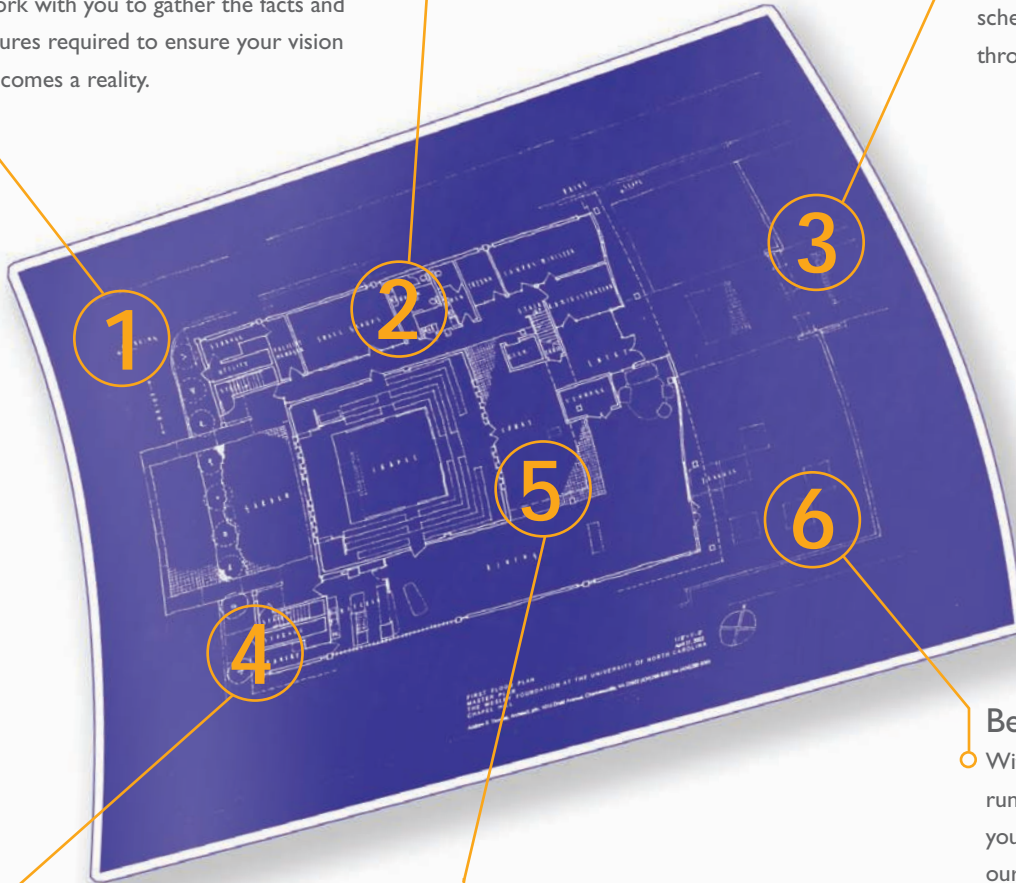

The Discovery (or visualization) phase is the first step towards a successful project. Client and system details are gathered and documented at this stage using our unique 'Discovery Toolkit.' At the initiation meeting we discuss and agree upon goals, needs, expected benefits and business requirements. We work with you to gather the facts and figures required to ensure your vision becomes a reality.

2 Planning

Comprehensive planning and collaboration between CoreSolutions and you, our client, is essential. In this phase all high-level project goals are further detailed setting the framework and foundation for your system. The Project Manager creates the 'Project Framework,' a formal plan that identifies your project team, milestones, schedules, constraints and roadblocks.

3 Definition & Design

In this phase, each goal is refined into a set of system requirements. These requirements define the major functions of the intended application, define data schemas, and establish work flows through the use of a variety of diagrams.

4 Development

A key advantage of following a structured process is that the original plan can be modified as the project unfolds. During this phase, your system is tested in a variety of ways by our team of developers, a dedicated Quality Assurance Analyst and by you, our client.

5 Implementation

This phase involves the creation of a detailed roll-out plan that outlines the route to be taken to install your application. A date is scheduled and coordinated with you to perform the installation and conduct data migration. Training sessions are also scheduled and conducted during this stage of the project, to ensure you and your team are empowered to manage your new system.

6 Beyond the Software

With your custom-built application up and running, together we have truly brought your blueprint to life! The final phase of our project life cycle ensures you are fully satisfied with the system developed and implemented. A post-project questionnaire helps us gauge your level of satisfaction with CoreSolutions and for the custom solution developed.
